Sheep Heart Dissection Lab Report - BIOLOGY JUNCTION

Process: We weighed the heart (219.42 g) and measured the height (13 cm), width (6 cm), and diameter (4 cm) of the heart, located the vessels with probes, and prepared the heart for a median cut. 3. Procedure: We started by locating the structures of the heart externally, such as the apex, atria, and ventricles and inserting probes in the vessels. After all the structures had been identified, we cut the heart into left and right planes and identified the chambers, the flaps, and chordae ...
