It is my great pleasure to write a foreword for this very important Antenna Hand-book. This, the sesquicentennial year of the completion of Maxwell's equations in 1865, is a conspicuous year to publish this handbook. Even though antenna technology has been around for about a hundred years, its importance remains hitherto.

Maximum LOS distance is dependent on the height of an antenna above the ground; the higher the antenna the further the maximum LOS distance. Because the radio signal travels in air, any obstructions, such as a mountain, between the two antennas can block or reduce the signal and prevent communications.

The original intent when the first edition was planned was to provide the reader with a practical, yet theoretical, book that could be used with only a minimal effort to actually design and install radio antennas. It was assumed that the readership would possess a wide range of levels of antenna sophistication,
