Chapter 9. Input/Output Processing. In "OPEN Deviceparameters", Add [NO]FFLF device parameter info and example to OPEN text. In "READ/WRITE Operations", Fix the description of what \$Y is set to. Add a brief note about [NO]FFLF and gtm_nofflf. Add note about HEREDOCs and minor edit to SD encryption.

Chapter 9. Input/Output Processing

Explanation: The default gateway is the address of the device a host uses to access the Internet or another network. If the default gateway is missing or incorrect, that host will not be able to communicate outside the local network. Because the host can access other hosts on the local network, the network cable and the other parts of the IP configuration are working.
